According to our (Global Info Research) latest study, the global Bio-Electron Microscopy (Bio-EM) Testing Services market size was valued at US\$ 1615 million in 2025 and is forecast to a readjusted size of US\$ 2998 million by 2032 with a CAGR of 9.2% during review period.

Bio-Electron Microscopy (Bio-EM) Testing Services refer to outsourced electron microscopy testing provided by third-party laboratories for biopharmaceuticals, vaccines, gene therapies, nanomedicines, and cell or tissue samples. The services primarily include TEM, Cryo-TEM, Cryo-EM, Cryo-ET, and limited biological SEM, applied for virus safety testing, cell bank quality control, AAV/retrovirus/adenovirus vector characterization, LNP/liposome nanomedicine analysis, protein complex structural determination, and process anomaly investigation. The estimated overall gross margin is approximately 46%.

These services essentially combine “high-end instrument platforms + biological analysis capability + compliant reporting” into an outsourced solution. Demand is driven mainly by biopharmaceutical R&D, viral safety testing, gene therapy, and structural drug discovery. TEM is used in virus safety testing to visualize viral particles, RVLPs, and cell-matrix-related risks, while Cryo-EM is more focused on high-value sample analysis such as protein complexes, AAV, and LNPs.

The fastest-growing segment is not traditional tissue-section EM but high-value samples such as AAV/viral vectors, LNP nanomedicines, and protein structure analyses. These samples have high batch value and high R&D failure costs, so clients are willing to pay for high-quality sample preparation, low sample volume, quantitative imaging, and

GMP/regulatory-compliant reporting.

Over the next six years, market growth is expected to outpace conventional testing services but remain below the peak demand seen during the early mRNA/LNP boom. Key constraints include EM equipment and personnel bottlenecks, sample preparation complexity, data analysis cycle time, and limited high-end instrument availability. However, with advances in automated sample preparation, AI-based image analysis, CRO platformization, and increasing outsourcing of biopharmaceutical QC, the market is expected to expand from research-focused services toward industrial QC and regulatory support services.
