## Abstracts

According to our (Global Info Research) latest study, the global Bio Fertilizer market size was valued at USD 2591.9 million in 2023 and is forecast to a readjusted size of USD 3243.1 million by 2030 with a CAGR of 3.3% during review period.

Biofertilizer are the substances which make use of microorganisms to fertile the soil. These fertilizers are not harmful to crops or other plants like the chemical fertilizers. They are actually taken from the animal wastes along with the microbial mixtures. Microorganisms are used to increase the level of nutrients in the plants. They let the plants grow in a healthy environment. They are also environment friendly and do not cause the pollution of any sort. Use of biofertilizers in the soil, makes the plants healthy as well as protect them from getting any diseases.

According to the 2022 Statistical Yearbook of the United Nations Agricultural and Food Organization, there are about 866 million people work in agriculture, accounting for more than a quarter of the world's total labor force and creating \$3.6 trillion in added value. According to data, North America was the region with the most fertilizer use in the world in 2021, accounting for 32.6% of the global fertilizer market size. From the perspective of demand, the proportion of micro-fertilizers used in many European countries has reached 45-60%, and the proportion of use in the United States was as high as 60-70%. According to our "Agriculture Research Center", the global fertilizer consumption was nearly 200 million tons in 2022. According to the National Bureau of Statistics, the total output value of China's fertilizer manufacturing industry in 2021 was 618.572 billion yuan, with a year-on-year increase of 5.05%. Global fertilizer consumption in 2021 increased by nearly 12 million tons, which compared to 2020.
