According to our (Global Info Research) latest study, the global Bio-identical Hormone Replacement Therapy market size was valued at USD 6384.6 million in 2023 and is forecast to a readjusted size of USD 9618.6 million by 2030 with a CAGR of 6.0% during review period.

Bioidentical hormone replacement therapy (BHRT) is the use of hormones that are identical on a molecular level with endogenous hormones in hormone replacement therapy.

The growing frequency of hormonal imbalance illnesses also aids the bioidentical hormone market's expansion. The health safety of the molecule bioidentical hormone, on the other hand, acts as a market restraint. The hormonal levels discovered in a patient with a hormonal imbalance are used to create customised bioidentical hormonal replacements. Additionally, the growing R&D activities by the key players for the discovery of novel therapeutics to treat hormonal imbalances and rising product approvals are expected to aid in the growth of the studied market over the forecast period. However, the high cost of hormone replacement therapy and the risk of developing cancers with HRTs are anticipated to hamper the market growth globally. Additionally, the rise and expansion of the healthcare sector, driven by both public and private actors, particularly in developing nations, will present profitable prospects for the personal health devices market. The market growth rate is also being supported by the governmental healthcare facilities' increased adoption of bioidentical hormone replacement therapy.
