According to our (Global Info Research) latest study, the global Bio Polypropylene market size was valued at USD 33 million in 2023 and is forecast to a readjusted size of USD 46 million by 2030 with a CAGR of 4.9% during review period.

Biopolypropylene is a thermoplastic polymer commonly used in the packaging industry. Other uses include textiles, bottles, Rubik's cube stickers, and even polymer banknotes. Because polypropylene shares many properties with polyethylene, they are commonly employed for similar uses. Polypropylene is especially resistant to fatigue, which is ideal for mobile plastic parts. Conventional polypropylene is made from petroleum in a process which results in large amounts of green house gases. However, an alternative process has been developed which allows for its synthesis from sugar cane.

Reduce of GHG emissions, growth of the bioplastics industry, rising preference of consumers for biodegradable products, the increasing demand for innovative packaging from MNCs are main factors contributing to the growth of market. North America is one of the prominent markets for bio-based polypropylene and this is largely owing to progressive regulations for bio-based polymers implemented by the U.S. EPA. Growth of automotive, construction, packaging, and electronics sectors in North America is likely to further drive the regional market over the forecast period.
