The global Bio-Resorbable Pins and Screw market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Bio-resorbable pins and screws are medical implants used in orthopedic surgeries, such as bone fixation or fracture repair. These pins and screws are made from bio-resorbable materials that gradually degrade and are absorbed into the body over time. They provide temporary internal support during the healing process and eliminate the need for subsequent surgeries for implant removal.

This report studies the global Bio-Resorbable Pins and Screw production, demand, key manufacturers, and key regions.
