According to our (Global Info Research) latest study, the global Bio-silicon Fertilizer market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Bio-silicon fertilizer is a type of fertilizer that contains silicon compounds or silicon-containing organic materials derived from biological sources, aimed at increasing the silicon content in the soil to promote plant growth and health. It typically includes silicate minerals, diatomaceous earth, and silicon extracts. By increasing the availability of silicon in the soil, bio-silicon fertilizers help plants enhance disease resistance, improve nutrient uptake, and support root development. They are widely used in modern agriculture for their environmental benefits and ability to improve crop quality.
