According to our (Global Info Research) latest study, the global Bio-Soluble Ceramic Paper market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Biosoluble ceramic papers are made of alkaline earth silicate wool and have an extremely uniform structure. They can withstand sustained high temperatures up to 1,260 °C, have low thermal conductivity, good high temperature stability, and are lightweight, smooth, flexible and easy to handle. They have low biopersistence, which means they are excreted faster by the body while maintaining their excellent thermal insulation and fire protection properties, making them an ideal solution to replace ceramic fibers.
