Abstracts

According to our (Global Info Research) latest study, the global Bio-Soluble Insulating Blanket market size was valued at US$ 708 million in 2025 and is forecast to a readjusted size of US$ 1333 million by 2032 with a CAGR of 9.6% during review period.

Bio-Soluble insulating blanket is manufactured from a blend of high purity calcium, silica, and magnesium. The modified composition results in a body soluble fiber that has a low bio persistence and is eco-friendly in comparison to traditional ceramic fiber.

Stringent health and safety regulations in various industries, such as manufacturing, petrochemicals, and construction, have been driving the demand for safer insulation materials. Bio-soluble fibers are seen as a more compliant option due to their reduced health risks. Growing environmental concerns and a focus on sustainable and eco-friendly materials have led to increased interest in bio-soluble fibers. These fibers are designed to have a lower environmental impact, and this aligns with the sustainability goals of many industries.
