Abstracts

The global Bioabsorbable Miniscrew market size is expected to reach \$ 136 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

Bioabsorbable Miniscrew is a small size implantable bone fixation screw made from degradable medical polymers or biocomposite materials. It is mainly used in precise bone fixation procedures involving craniomaxillofacial surgery, small bones, hand and foot surgery, pediatric orthopedics and bone fragment fixation. These products provide the necessary mechanical fixation and support during the early stage of bone healing, then gradually degrade and are absorbed by the body. Some products may also support bone repair through bioactive or osteoconductive materials, thereby reducing permanent metallic implant retention and the potential need for later removal surgery. The unit price of Bioabsorbable Miniscrew is typically several hundred dollars, and the gross profit margin is usually between 60% and 75%.

The upstream supply chain of Bioabsorbable Miniscrews mainly includes medical grade absorbable polymers, bioceramic fillers, precision molds, micro machining equipment, sterile packaging materials, sterilization services and implant grade quality testing services. Material purity, molecular weight stability, degradation consistency and mechanical strength at small dimensions are key quality control factors. The midstream consists of manufacturers of orthopedic implants, craniomaxillofacial fixation systems and small bone fixation products, with core processes including material formulation, miniaturized structural design, precision injection molding or machining, thread forming, size series development, sterilization packaging, regulatory approval and clinical promotion. Downstream customers mainly include orthopedic departments of general hospitals, craniomaxillofacial surgery departments, oral and maxillofacial surgery departments, hand and foot surgery departments, pediatric orthopedic departments,

trauma surgery departments, specialty hospitals, ambulatory surgery centers and distributor channels. End demand is jointly influenced by procedure volume, surgeon preference, product accessibility, hospital procurement policies and reimbursement conditions.

The Bioabsorbable Miniscrew market is a material innovation driven segment within orthopedic, craniomaxillofacial and small bone fixation consumables, with demand mainly from craniomaxillofacial repair, hand and foot small bone fixation, bone fragment fixation, pediatric orthopedics, osteotomy and minor fracture fixation. Compared with conventional metallic miniscrews, bioabsorbable miniscrews can gradually degrade and be absorbed after bone healing, helping reduce long term foreign body retention, imaging interference and the need for secondary removal surgery. As a result, they offer strong clinical value in pediatric patients, maxillofacial applications and procedures where long term implant retention is a concern. Future competition will focus on controllable degradation, initial fixation strength, small size precision manufacturing, biocompatibility, surgical convenience and indication expansion, while companies with absorbable material platforms, precision molding capabilities and specialized clinical channels will be better positioned.
