According to our (Global Info Research) latest study, the global Bioactive Wound Care market size was valued at USD 9633.5 million in 2023 and is forecast to a readjusted size of USD 13800 million by 2030 with a CAGR of 5.3% during review period.

Conventional wound healing turns out unproductive in healing acute wounds such as deep cuts, burn injuries, and chronic ulcers. Introduction of bioactive wound care products has efficiently provided solution to treat such critical wounds and injuries. Bioactive wound dressings control infection and hasten healing process, reduce the risk of leakage, alleviate pain and discomfort.

Rapid population growth, rise in disposable income and rising healthcare expenditure are main factors contributing to the growth of market. With the increasing target population, the bioactive wound care market is estimated to witness lucrative growth. Rise in awareness among the patients regarding personal hygiene is augmenting the demand for these products. The raised awareness levels cause patients to seek physicians' advice at an early stage thus enabling timely interventions. Rising per capita healthcare expenditure in the recent years and the increasing disposable income is enabling the population to spend a substantial amount on healthcare facilities, thereby contributing towards the growth of the market. The development of advanced products, such as combination wound dressings containing multiple ingredients that offer several benefits to patients, is anticipated to boost the demand for these products. The Americas dominated the bioactive wound care market and accounted for a total market share of about 43% on account of favorable reimbursement policies, the rise in a number of chronic wound cases, and the increasing awareness among patients.
