Bioactive dressings are also known as airtight dressings because they prevent dryness of the wound surface. The dressing is a combination dressing made of high-molecular materials and biological materials by high-tech method, which is a hot spot in the research and development of wound dressings. The biosynthetic dressing has a two-layer structure, and the outer layer is coated with a polymer material to provide a barrier function corresponding to the epidermis; the main material selected for the inner layer is collagen, chitosan protective dressing and calcium alginate, which have biological properties. Compatibility, better water absorption, gas permeability, adhesion and antibacterial, hemostatic effect.
