## Abstracts

According to our (Global Info Research) latest study, the global Bioadhesives for Packaging market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Bioadhesives are natural polymeric substances that are formed synthetically from biological monomers such as sugars. The primary composition of bioadhesives includes raw materials such as proteins and carbohydrates, of which gelatin and starch are general-purpose adhesives. It is majorly used in end-user applications such as in paper and packaging application, construction sector and wood and furniture industry.

The growing preference for sustainable packaging will be one of the primary growth drivers for the global bio-adhesives market for packaging applications. The packaging industry extensively uses bio-adhesives in various packaging applications such as printed sheet laminations, flexible packaging, cigarettes and filters, cases and cartons, and specialty packaging. The need for bio-adhesives will further increase due to the rising demand for flexible packaging and corrugated boxes from the food and beverage industry and retail chains. Additionally, they are also used in the frozen food and beverage industry for packaging applications because they have mineral oil in the adhesive composition that does not cause any health issues. one driver in the market is favorable policies by government regulatory bodies. Favorable policies by government bodies on bio-adhesives in consumer and industrial applications will lead the potential growth of the market. Environmental agencies such as the CEC and the EPA have imposed strict regulations to reduce the consumption of synthetic adhesives, which will tremendously boost the growth of the bio-adhesives market in end-user applications, especially in packaging. one challenge in the market is low shelf life of bio-adhesives.

Bio-adhesives that are generally made from plant and animal sources have a low shelf life.
