## Abstracts

According to our (Global Info Research) latest study, the global Biobank Management Systems market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Biobank Management System is a sample library resource management system based on cell sample workflow. According to the operations involved in the laboratory sample workflow, the entire process recording of the sample life cycle and efficient and continuous management of all-round quality control are achieved.

Biobanks are becoming increasingly important to many organizations in the biotechnology, pharmaceutical industries, and medical research fields as there is a growing awareness of their ability to answer relevant research questions. The higher the quality of biobanks, the more accurate or fine-grained the research based on them will be. This requires excellent management of various samples such as blood, tissue, saliva, DNA, etc., integration with electronic medical/health records (EMR/EHR), and compliance with relevant regulatory environments such as HTA, GCLP, MHRA, FDA 21 CFR Part 11 and other similar requirements. Real-time complete sample inventory is critical, including tracking aliquots, pooled samples, and samples processed for experiments and subsequently stored. Other requirements often include logistics management and cold chain monitoring.
