Abstracts

The global Biobank Management Systems market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Biobanks are becoming increasingly important to many organizations in the biotechnology, pharmaceutical industries, and medical research fields as there is a growing awareness of their ability to answer relevant research questions. The higher the quality of biobanks, the more accurate or fine-grained the research based on them will be. This requires excellent management of various samples such as blood, tissue, saliva, DNA, etc., integration with electronic medical/health records (EMR/EHR), and compliance with relevant regulatory environments such as HTA, GCLP, MHRA, FDA 21 CFR Part 11 and other similar requirements. Real-time complete sample inventory is critical, including tracking aliquots, pooled samples, and samples processed for experiments and subsequently stored. Other requirements often include logistics management and cold chain monitoring.

Biobank Management System is a sample library resource management system based on cell sample workflow. According to the operations involved in the laboratory sample workflow, the entire process recording of the sample life cycle and efficient and continuous management of all-round quality control are achieved.
