According to our (Global Info Research) latest study, the global Biobased Malic Acid market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Bio-based malic acid is a kind of malic acid produced from biomass, which has the advantages of being more environmentally friendly and sustainable than traditional chemically synthesized malic acid.

The manufacturing process of bio-based malic acid utilizes biomass resources, such as crops, food processing waste, etc., and is produced through biotechnology means such as biological fermentation and enzymatic hydrolysis. Compared with chemical synthesis methods, the manufacturing process of bio-based malic acid does not use fossil raw materials, reducing environmental pollution and resource consumption. In addition, bio-based malic acid also has similar chemical properties and uses to chemically synthesized malic acid, and can be widely used in food, beverage, cosmetics and other fields. In short, bio-based malic acid is an environmentally friendly and sustainable bio-based chemical with broad application prospects and market prospects.
