## Abstracts

According to our (Global Info Research) latest study, the global Biobased Polymer Additives market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The main task of polymer additives is to improve the mechanical properties of the polymer being manufactured, so the selection process needs to consider the desired properties, and fortunately, natural additives can meet almost any need. They can improve the mechanical properties of polymers, reduce weight, blend with pigments, and even provide greater hardness or greater flexibility, making them more durable and/or less prone to cracking. Bio-based additives can also provide added value, help exceed ESG requirements, and reduce production costs.
