According to our (Global Info Research) latest study, the global Biochemical Oxygen Demand (BOD) Analyzer market size was valued at USD 76 million in 2023 and is forecast to a readjusted size of USD 103.6 million by 2030 with a CAGR of 4.5% during review period.

Biochemical Oxygen Demand or Biological Oxygen Demand, is a measurement of the amount of dissolved oxygen (DO) that is used by aerobic microorganisms when decomposing organic matter in water.

Biochemical Oxygen Demand is an important water quality parameter because it provides an index to assess the effect discharged wastewater will have on the receiving environment. The higher the BOD value, the greater the amount of organic matter or “food” available for oxygen consuming bacteria. If the rate of DO consumption by bacteria exceeds the supply of DO from aquatic plants, algae photosynthesis or diffusing from air, unfavourable conditions occur. Depletion of DO causes stress on aquatic organisms, making the environment unsuitable for life. Further, dramatic depletion can lead to hypoxia or anoxic environments. BOD is also used extensively for wastewater treatment, as decomposition of organic waste by microorganisms is commonly used for treatment.

Global Biochemical Oxygen Demand (BOD) Analyzer key players include Hach (Danaher), WTW (Xylem), LAR Process Analysers, Lovibond (Tintometer), Lianhua Technology, etc. Global top five manufacturers hold a share over 30%.
