According to our (Global Info Research) latest study, the global Biochemical Testing market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Biochemical tests are the tests used for the identification of bacteria species based on the differences in the biochemical activities of different bacteria. Microbial biochemistry tests shorten the time required to identify microbes, reduce costs, and ensure or enhance the accuracy of identification of an unknown sample. It is the fastest developing trend in microbial identification. Biochemical tests can be used to determine the prognosis of a disease. Biochemical tests can be used to detect the development of complication of disease or their treatment before these become obvious clinically and thus allow appropriate action to be taken before any clinical deterioration.
