Abstracts

According to our (Global Info Research) latest study, the global Biochips market size was valued at USD 9777.5 million in 2023 and is forecast to a readjusted size of USD 17540 million by 2030 with a CAGR of 8.7% during review period.

Biochips are bio-microsystems. Bio-microsystems are small integrated devices used for biochemical reactions, biological monitoring, research, academic studies, drug discovery, and much more. In simple terms, biochips are small sized chips that can perform multiple (generally thousands) biochemical reactions parallelly. A collection of microarrays or micro-test sites form these biochips. Microarrays when arranged on a surface made up of either glass or silicon, can perform large numbers of tests at the same. Thus, they help in cost and time saving.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
