Abstracts

Biochips are bio-microsystems. Bio-microsystems are small integrated devices used for biochemical reactions, biological monitoring, research, academic studies, drug discovery, and much more. In simple terms, biochips are small sized chips that can perform multiple (generally thousands) biochemical reactions parallelly. A collection of microarrays or micro-test sites form these biochips. Microarrays when arranged on a surface made up of either glass or silicon, can perform large numbers of tests at the same. Thus, they help in cost and time saving.

Scope of the Report:

This report focuses on the Biochips in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. North America accounted for the largest share of the biochips market in 2017. The large share of this regional segment can majorly be attributed to the rising geriatric population; increasing prevalence of lifestyle diseases, such as diabetes, asthma, and cardiac disorders; growing adoption of biochips; and a significant number of ongoing research activities and discoveries related to biochips in the North American region. In addition, major local companies have easy access to Biochips market, which makes it the largest and most significant market for suppliers. Asia-Pacific, on the other hand, is expected to grow at the highest CAGR over the next five years. The worldwide market for Biochips is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
