Abstracts

The global Biocomplex Deodorant market size is expected to reach \$ 862.3 million by 2029, rising at a market growth of 4.0% CAGR during the forecast period (2023-2029).

The basic principle is to use microorganisms to absorb the malodorous substances in dissolved water into the microorganisms themselves, and degrade them through the metabolic activities of microorganisms. Microbial deodorization can be divided into three stages:

? Dissolution process of malodorous gas, that is, transfer from gas phase to liquid phase;

?The malodorous components in the aqueous solution are adsorbed and absorbed by microorganisms;

? The malodorous components entering the microbial cells are decomposed and utilized by the microorganisms as nutrients, so that the pollutants can be removed.
