## Abstracts

According to our (Global Info Research) latest study, the global Biodegradable Agricultural Spray Tank Cleaner market size was valued at US\$ 193 million in 2025 and is forecast to a readjusted size of US\$ 304 million by 2032 with a CAGR of 6.7% during review period.

Biodegradable Agricultural Spray Tank Cleaner refers to a class of environmentally formulated chemical products specifically designed to remove residues of pesticides, herbicides, fungicides, and fertilizers from the internal surfaces of crop protection spray equipment, including tanks, booms, hoses, and nozzles. The defining characteristic is that the cleaning actives comprising surfactants, enzymes, oxidizing agents, or mild alkaline builders achieve ~60% biodegradation within 28 days under natural environmental conditions, thereby minimizing ecotoxicological impact from agricultural runoff. In 2025, global production reached approximately 17,045 ton, with an average global market price of around USD 11,000 per ton. A factory gross profit of USD 2,860 per ton with 26% gross margin. A single line full machine capacity production is around 500 ton per line per year. downstream demand is concentrated in agriculture, agrochemical and landscaping. biodegradable cleaning agents are circulated through spray tanks in between herbicide formulations spraying to eliminate residual herbicide cintanimation, prevent crop damage from chemical carryover and reduce environmental discharge risk. China is leading the market due to a broad pesticide-use base and stronger modernization of application practice. In Spain export horticulture, orchard depth, and stronger spray hygiene needs in sensitive crop systems supported the market growth.
