Abstracts

Biodegradable Bone Graft Polymers is profoundly carving an evolution tale from conventional allogeneic and autologous bone grafting techniques to synthetic bone grafts, primarily on account of the biodegradability and biocompatibility properties of the latter. Synthetic bone graft polymers are capable of mimicking efficiently the mechanical and physical nature of native tissue, increases osteoconduction for bone reconstruction.

According to our (Global Info Research) latest study, the global Biodegradable Bone Graft Polymers market size was valued at USD 353.6 million in 2022 and is forecast to a readjusted size of USD 522.7 million by 2029 with a CAGR of 5.7% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

These biodegradable polymers can release drugs or growth factors in a spatial manner, a factor that has led to its extensive deployment in the designing of biomimetic scaffold for bone regeneration. It has been a long way since its inception, biodegradable bone graft polymers industry now boasts of offering innovative and effective medical solutions, that were claimed to remain absent for so long in the orthopedic space.
