Abstracts

According to our (Global Info Research) latest study, the global Biodegradable Cellulose Sponge market size was valued at US$ 2419 million in 2025 and is forecast to a readjusted size of US$ 3055 million by 2032 with a CAGR of 3.4% during review period.

A cellulose sponge, as its name connotes, is made of cellulose (the material that makes up the walls of a plant cell) mixed with hemp fibers and sodium sulphate crystals, environmentally friendly and biodegradable. It’s heated up, cut to size, bleached, and rinsed. For the most part, these sponges are just like non-cellulose alternatives. That includes plastic sponges and other products and materials manufactured and marketed for similar purposes. Crucially, cellulose sponge is hydrophilic. Hydrophilic materials attract water. As water and other liquids spread across their surfaces, contact is maximized by the random-celled nature of the material. The result is excellent absorbency. It’s the main reason cellulose sponges are most extensively employed in the cleaning products industry.

The use of plastic materials in producing the sponges is generating landfills that tend to remain in the environment for over 52,000 years, whereas the cellulose sponges remain in the landfills for nearly a year. Therefore the utilization of natural raw materials in the production process is considered the major driver of the cellulose sponge market. The rising demand across household applications such as wiping and cleaning and increasing inclination towards protecting the cleaner indoor environment and better living spaces are enhancing the overall cellulose sponge industry growth in recent years. For instance, cellulose sponges are made of natural materials that are derived from plants; they don't cause any harm to the environment or emit poisonous gases such as CO2 when burnt or buried. Moreover, several countries are imposing stringent

regulations on harmful emissions and reducing carbon footprints, which are expected to encourage cellulose sponge market growth during the forecast period. Thus, driving the Cellulose Sponge market revenue.
