According to our (Global Info Research) latest study, the global Biodegradable Collagen Membrane market size was valued at US\$ 275 million in 2024 and is forecast to a readjusted size of USD 418 million by 2031 with a CAGR of 6.2% during review period.

Biodegradable Collagen Membrane is a natural, resorbable barrier material made from purified collagen, often derived from animal sources like bovine or porcine. It is designed to degrade naturally within the body over time, eliminating the need for surgical removal. These membranes are primarily used in medical and dental applications, such as guided tissue regeneration (GTR) and guided bone regeneration (GBR), to support wound healing and tissue regeneration by acting as a barrier against soft tissue intrusion. With high biocompatibility, controlled biodegradation rates, and the ability to promote cellular adhesion, biodegradable collagen membranes are widely utilized in periodontal treatments, implantology, and other regenerative procedures.
