According to our (Global Info Research) latest study, the global Biodegradable Magnesium-Based Implants market size was valued at US\$ 135 million in 2025 and is forecast to a readjusted size of US\$ 166 million by 2032 with a CAGR of 3.0% during review period.

Biodegradable magnesium alloys as a new generation of biomedical materials have many advantages over traditional materials, in line with the development trend of biomedical materials. It can be used for the development of unique new medical devices. Its clinical applications will have a milestone in the development of biomedical materials.

With the increasing global focus on sustainability and environmental friendliness, the market trend for biodegradable magnesium-based implants in the medical devices sector is on the rise. These implants are highly favored for their excellent biocompatibility and biodegradable properties. Magnesium is an essential trace element in the human body, which means magnesium-based implants do not induce unnecessary allergic reactions or rejection. Additionally, they can gradually degrade within the body, reducing the need for secondary surgeries and positively impacting patient recovery and quality of life. From a market perspective, the increasing aging population worldwide and the prevalence of chronic diseases such as musculoskeletal disorders create extensive opportunities in the biodegradable magnesium-based implant market. The trend in the medical industry is shifting towards personalized medicine and reducing surgical risks, aligning well with the characteristics of magnesium-based implants. Consequently, it is expected that over time, this market will continue to grow rapidly to meet the demand for sustainable and efficient treatment

methods from both patients and healthcare professionals.
