According to our (Global Info Research) latest study, the global Biodegradable Medical Microspheres market size was valued at US\$ 979 million in 2024 and is forecast to a readjusted size of USD 1600 million by 2031 with a CAGR of 7.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Biodegradable medical microspheres are tiny spherical carriers made from polymers that can naturally degrade within the body. They are widely used in controlled drug release, targeted drug delivery, vaccine administration, and tissue regeneration. Common materials include polylactic acid (PLA), polyglycolic acid (PGA), and poly(lactic-co-glycolic acid) (PLGA). After administration, these microspheres degrade into non-toxic byproducts that are either absorbed or excreted by the body, eliminating the need for surgical removal and enhancing the safety and convenience of medical treatments.
