According to our (Global Info Research) latest study, the global Biodegradable Micro Screws market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Biodegradable microscrews are medical devices used in fracture repair and bone implant surgeries. Unlike traditional metal screws, biodegradable micro-screws are made of biodegradable materials and can be gradually degraded and absorbed in the body within a certain period of time without the need for re-operation to remove them. This device is used during orthopedic surgery to stabilize fracture ends, promote bone healing, and gradually disappears after healing, thereby reducing patient discomfort and risk of complications. With the development of digital technology, more customized biodegradable micro-screw designs may appear to meet the needs of different patients.
