## Abstracts

According to our latest research, the global Biodegradable and Compostable Packaging Material market size will reach USD 1857 million in 2031, growing at a CAGR of 9.4% over the analysis period.

Biodegradable Packaging materials designed to break down naturally by microorganisms into water, carbon dioxide, and biomass over time. These materials are typically derived from renewable sources like starch, cellulose, or proteins. All compostable products are biodegradable, but biodegradable products are not always compostable. Compostable packaging has defined characteristics, tested and evaluated according to standardized parameters (UNI EN 13432). Compostable packaging is prepared for industrial composting plants and must be mixed with organic waste in order to, as the term implies, turn it into compost.
