## Abstracts

The global Biodegradable Orthopedic Implants market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Biodegradable orthopedic implants are medical devices that are designed to be gradually broken down and absorbed by the body after they have served their intended purpose. These implants are made from materials that are biocompatible and biodegradable, meaning they do not cause an adverse reaction within the body and can be safely broken down and eliminated over time. Biodegradable orthopedic implants have been developed as an alternative to traditional metallic or non-degradable implants, which may require a second surgery for removal or can cause long-term complications. These implants can be used for various orthopedic applications, such as bone fixation, joint reconstruction, and spinal repair. The use of biodegradable orthopedic implants is a growing field in the medical industry, as they provide a more patient-friendly and sustainable solution for orthopedic surgeries.
