Abstracts

According to our (Global Info Research) latest study, the global Biodegradable Plant-based Packaging market size was valued at US\$ 4499 million in 2025 and is forecast to a readjusted size of US\$ 10288 million by 2032 with a CAGR of 12.5% during review period.

In 2025, global sales of biodegradable plant-based packaging reached 1.65 million tons, with an average selling price of US\$2,650 per ton. Biodegradable plant-based packaging refers to packaging products made primarily from plant-derived biomass materials (such as PLA, PHA, starch-based, cellulose-based, PBS, etc.) through film formation, hot pressing, blow molding, or injection molding. These products are compostable, biodegradable, and have low carbon emissions, and are widely used in food packaging, takeout packaging, supermarket bags, express delivery cushioning materials, disposable consumer goods, and biomedical consumables. Upstream raw materials include corn syrup, tapioca starch, bagasse fiber, vegetable oils, biodegradable resins, and additives, mainly supplied by biomaterials companies and agricultural product processing plants. Downstream customers include food companies, takeout platforms, retailers, e-commerce logistics companies, and medical packaging processing plants. Current global total production capacity is approximately 2.1 million tons per year, with an average industry gross profit margin of approximately 18-25%. In terms of demand and business opportunities, the expansion of global plastic bans, increased carbon emission pressure, and the accelerated replacement of traditional plastics in food and e-commerce packaging are driving a rapid increase in the penetration rate of plant-based materials. With declining costs, enhanced performance (heat resistance, moisture resistance, and increased strength), and accelerated regional localization of production capacity, the next 5–10 years will be one of the most

promising periods for the biodegradable packaging industry chain.
