According to our (Global Info Research) latest study, the global Biodegradable Polyester Fiber market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Biodegradable Polyester Fiber refers to a type of synthetic fiber that is made from biodegradable polyester material. It is designed to break down naturally in the environment, typically through the action of microorganisms, into simpler compounds like carbon dioxide, water, and biomass. This type of fiber is derived from renewable resources such as corn, sugarcane, or other plant-based materials. Biodegradable Polyester Fiber offers an eco-friendly alternative to conventional synthetic fibers, as it reduces environmental pollution and waste accumulation. It finds applications in various industries, including textiles, packaging, and nonwoven materials, contributing to a more sustainable and circular economy.

The industry trend of biodegradable polyester fiber is experiencing significant growth and promising prospects. With increasing consumer awareness and demand for sustainable products, there is a growing emphasis on eco-friendly fibers in the textile and packaging industries. Biodegradable polyester fiber is gaining traction as a viable solution due to its ability to degrade harmlessly in the environment. Manufacturers are investing in research and development to improve the properties and performance of these fibers, such as strength, durability, and dyeability. Government regulations and initiatives aimed at reducing plastic waste and promoting sustainable materials also contribute to the industry trend. Overall, the market for biodegradable polyester fiber is expected to continue expanding as sustainability becomes a priority in multiple sectors.
