Abstracts

Superabsorbent Polymer (SAP) is a material capable of absorbing several hundred to 1,000 times its own weight in water. Even when subject to pressure, this polymer securely retains the absorbed liquids. Biodegradable superabsorbent materials are basically superabsorbent polymers which are biocompatible and are degradable. These materials are a combination of synthetic and renewable raw materials.

This report studies the global Biodegradable Superabsorbent Materials production, demand, key manufacturers, and key regions.
