## Abstracts

According to our (Global Info Research) latest study, the global Biodegradation and Harmlessness Service market size was valued at US\$ 5464 million in 2025 and is forecast to a readjusted size of US\$ 11142 million by 2032 with a CAGR of 10.8% during review period.

Biodegradable waste treatment services are a comprehensive solution for organic waste, utilizing biological principles and technologies to decompose, degrade, or convert organic waste into harmless substances or energy. These services include, but are not limited to, biological treatment, bioremediation, and bioconversion methods, aiming to reduce the adverse impacts of waste on the environment and human health, and promote the efficient use of resources and environmental protection.

The upstream of the biodegradable waste treatment service industry chain mainly includes biodegradation technology research and development institutions, microbial agents and enzyme preparation suppliers, biodegradation equipment manufacturers, and related environmental protection material suppliers, providing technical, reagent, and equipment support for degradation treatment. The midstream consists of biodegradable waste treatment service providers who use technologies such as microbial fermentation, enzymatic hydrolysis, and anaerobic digestion to treat and utilize organic waste, agricultural waste, kitchen waste, livestock and poultry manure, and some biodegradable plastics in a harmless manner. The downstream is mainly applied in urban solid waste treatment, agricultural waste treatment, the food processing industry, environmental governance, and the circular economy industry to achieve waste reduction, harmlessness, and resource utilization. Overall, this industry belongs to the field of environmental protection and resource recycling services, with both

project-based and operation-based services coexisting. The industry's gross profit margin is usually around 25%-45%, with projects with higher technical content or resource utilization (such as biogas and organic fertilizer production) having relatively higher gross profit margins.

Biodegradation harmless services are particularly important in the current context of increasing environmental awareness. By using biological principles and technologies to convert organic waste into harmless substances or energy, this service not only helps reduce the pollution caused by waste to the environment, but also promotes the recycling and sustainable development of resources. Therefore, investing in and promoting biodegradation harmless services not only meets the requirements of environmental protection, but also makes positive contributions to the sustainable development of society and the economy.
