## Abstracts

According to our (Global Info Research) latest study, the global Biodiesel Catalyst market size was valued at USD 421.1 million in 2023 and is forecast to a readjusted size of USD 459.2 million by 2030 with a CAGR of 1.2% during review period.

Biodiesel is an alternative fuel for diesel engines that is produced by chemically reacting a vegetable oil or animal fat with an alcohol such as methanol or ethanol.

The chemical reaction used to make biodiesel requires a catalyst. A catalyst is usually a chemical added to the reaction mixture to speed up the reaction. Since the catalyst is not consumed in the reaction, it will be left over at the end in some form. In biodiesel production, the actual compound that catalyzes the reaction is called methoxide. One common way to make methoxide is to dissolve sodium hydroxide or potassium hydroxide in methanol. Large producers buy a solution of sodium methoxide in methanol that is much safer to work with.

In this report, we research all biodiesel catalyst including hydroxide, sodium methylate solution and other.

Currently, there are eight major suppliers in this industry, such as Evonik, BASF, TSS Group, Dupont, Camera Agricultura, DOW, Albemarle and Sud-Chemie etc. Market concentration in this industry is high and global top three manufacturers' total production share is 66%. Global top three suppliers are Evonik, BASF and TSS Group.
