Abstracts

Bioenergy is renewable energy made available from materials derived from biological sources. Biomass is any organic material which has stored sunlight in the form of chemical energy. As a fuel it may include wood, wood waste, straw, manure, sugarcane, and many other by-products from a variety of agricultural processes.

Scope of the Report:

This report focuses on the Bioenergy in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The growing demand for energy to keep up with the industrial spurt and the rampant urbanization has created a huge shortfall, coaxing several countries to resort to alternative energy options. The increasing pressure on the world leaders to reduce the carbon footprint and the deadly amount of greenhouse gasses is also forcing nations across the globe, especially developing countries to take up the option of bioenergy seriously. One of the key factors for the increasing demand for bioenergy is that it is derived from local feedstocks. To encourage the production of biomass feedstocks, cultivators and farmers are offered incentives by the governments. Agriculture-based economies generate huge amounts of agricultural waste. The instability in the global crude oil prices has caused a sharp decline in oil trading prices. A systemic demand-supply imbalance in the global crude oil markets, which has diminished the popularity of bioethanol, biodiesel, and other alternative renewable fuels can be attributed to the significant decline in oil price. The low crude oil prices have expanded the price gap between conventional fuels and biofuels. EMEA will be the major revenue contributor to the biomass energy market throughout the forecast period. The strong infrastructural

development and economic growth will drive the growth of the bioenergy market in the region.

The worldwide market for Bioenergy is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
