Abstracts

Bioethanol is an alcohol made by fermentation, mostly from carbohydrates produced in sugar or starch crops such as corn, sugarcane, or sweet sorghum. Cellulosic biomass, derived from non-food sources, such as trees and grasses, is also being developed as a feedstock for ethanol production.

Scope of the Report:

This report focuses on the Bioethanol in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In 2017, the transportation end-use industry segment accounted for the largest share of the bioethanol market. The transportation sector accounts for a major share of approximately 14 to 20% of the worlds CO2 emission. Producing and using bioethanol in fuels can help reduce CO2 emissions significantly. This acts as the major growth driver for the transportation industry, which, in turn, acts as a key driver for the bioethanol market. However, the fastest growing end-use industry segment for the bioethanol market is the alcoholic beverages segment. The growth of this industry is attributed to the increasing purchasing power and acceptance of drinking alcoholic beverages in developing countries. The worldwide market for Bioethanol is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
