According to our (Global Info Research) latest study, the global Biofertilizer market size was valued at USD 2591.9 million in 2023 and is forecast to a readjusted size of USD 4453.3 million by 2030 with a CAGR of 8.0% during review period.

Biofertilizer are the substances which make use of microorganisms to fertile the soil. These fertilizers are not harmful to crops or other plants like the chemical fertilizers. They are actually taken from the animal wastes along with the microbial mixtures. Microorganisms are used to increase the level of nutrients in the plants. They let the plants grow in a healthy environment. They are also environment friendly and do not cause the pollution of any sort. Use of biofertilizers in the soil, makes the plants healthy as well as protect them from getting any diseases.

Biofertilizer has a low concentration. The top five companies account for more than 12% of market share. Novozymes, Agri Life, Symborg, xi'an Delong Bio-industry and Maboshi are the tycoons of Biofertilizer. Novozymes is the largest manufacturer, with the market share of about 4%.

China is the largest consumption region, with a consumption market share nearly 30%. Following China, USA is the second largest consumption area with the consumption market share of about 26%.

In terms of application, biofertilizer can be applied in cereals & grains, pulses & oilseeds, fruits & vegetables and other. Pulses & oilseeds accounted for the largest market with about 45% of the global consumption for biofertilizer.
