Abstracts

The global Biogas market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

This report studies the Biogas market. Biogas is the gaseous product of anaerobic digestion, a biological process in which microorganisms break down biodegradable material in the absence of oxygen.

Biogas is comprised primarily of methane (50%–70%) and carbon dioxide (30%–50%), with trace amounts of other particulates and contaminants. It can be produced from various waste sources, including landfill material; animal manure; wastewater; and industrial, institutional, and commercial organic waste.

Biogas can also be produced from other lignocellulosic biomass (e.g., crop and forest residues, dedicated energy crops) through dry fermentation, co-digestion, or thermochemical conversions (e.g., gasification).

China is the largest market, with a share over 30%, followed by USA and Germany, both have a share about 45 percent.

In terms of product, Livestock Farm is the largest segment, with a share about 55%. And in terms of application, the largest application is Electricity, followed by Gas Grid, Vehicle Fuel, etc.

This report studies the global Biogas production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Biogas and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Biogas that contribute to its increasing demand across many markets.
