According to our (Global Info Research) latest study, the global Biogas Purification Membrane market size was valued at US\$ 112 million in 2024 and is forecast to a readjusted size of USD 190 million by 2031 with a CAGR of 7.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Biogas Purification Membrane is a membrane technology used to purify biogas (such as marsh gas). Biogas is a mixed gas produced by the fermentation of organic waste, and its main components include methane (CH₄), carbon dioxide (CO₂), water vapor, hydrogen sulfide (H₂S) and other trace gases. In order to improve the quality and utilization value of biogas, especially for energy production (such as gas turbines, fuel cells, automobile fuels, etc.), biogas needs to be purified to remove impurities and unnecessary components.
