## Abstracts

According to our (Global Info Research) latest study, the global Biodegradable Films market size was valued at USD 1203.7 million in 2023 and is forecast to a readjusted size of USD 1754.6 million by 2030 with a CAGR of 5.5% during review period.

Biodegradable films are plastic based films that have additives included in the manufacturing process. These additives, usually enzymes, enable the plastic to break down. When the film breaks down, it simply turns into smaller pieces of plastic. Therefore, biodegradable films aren't as environmentally friendly as they're cracked up to be. Biodegradable plastics also require specific conditions to break down, such as sunlight or certain temperatures. This means they can still take years (even decades) to break down and can leave behind micro-fragments of plastic. Plus, they can sometimes emit CO<sub>2</sub> when they're decomposing, which isn't ideal.

The research process involved the study of various factors affecting the industry, including the government policy, market environment, competitive landscape, historical data, present trends in the market, technological innovation, upcoming technologies and the technical progress in related industry, and market risks, opportunities, market barriers and challenges.
