According to our (Global Info Research) latest study, the global Biogas Separation Membrane market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Biogas Separation Membrane uses the different selective permeability of different gases to the permeable membrane, and can simultaneously separate CH₄, CO₂, and H₂S, that is, CO₂ and H₂S cannot pass through the permeable membrane under pressurized conditions, but CH₄ can pass through, thereby separating CH₄ Separation from other polluting gases to purify biogas.

Biogas Separation Membrane uses the different selective permeability of different gases to the permeable membrane, and can simultaneously separate CH₄, CO₂, and H₂S, that is, CO₂ and H₂S cannot pass through the permeable membrane under pressurized conditions, but CH₄ can pass through, thereby separating CH₄ Separation from other polluting gases to purify biogas. The application of biogas separation membrane in biogas purification has the following advantages: methane escape (loss) during the purification process is 1000Nm³/h); can start and stop the operation of equipment in a short time interval, A high degree of flexibility is ensured; direct input (via the gas pipeline) into the gas supply network is possible without additional compressors. In terms of product type, type >99% methane recovery rate is the largest segment, occupied for a share of 62.86%, and in terms of application, application commercial factory biogas digester has a share about 85.61 percent.
