Abstracts

The global Biogas Upgrading Equipment market size is expected to reach \$ 2434 million by 2032, rising at a market growth of 14.7% CAGR during the forecast period (2026-2032).

Biogas upgrading equipment (biogas upgrader) is a facility that is used to concentrate the methane in biogas to natural gas standards. The system removes carbon dioxide, hydrogen sulphide, water and contaminants from the biogas. The solution is the use of biogas upgrading or purification processes whereby contaminants in the raw biogas stream are absorbed or scrubbed, leaving more methane per unit volume of gas. There are four main methods of upgrading: water washing, pressure swing adsorption, selexol adsorption, and amine gas treating.

Global key players of Biogas Upgrading Equipment include Pentair Haffmans, Evonik, Greenlane Renewables, UBE, Air Liquide, etc. The top five players hold a share about 38%. Europe is the largest market for Biogas Upgrading Equipment and has a share about 66%, followed by North America and China, with share 23% and 4%, separately. In terms of product type, Membrane Separation is the largest segment, occupied for a share of 41%. In terms of application, Agricultural is the largest application, occupied for a share of 57%.
