Abstracts

Biologic excipients are substances other than the pharmacologically active drug component, which are included in the biologic drug manufacturing process or are contained in a finished pharmaceutical product dosage form. They facilitate formulation design and perform a range of functions such as increasing lubricity, enhancing flow ability, and improving compressibility, among others. Increasing demand for biologic excipients coupled with growing demand for extended-release or sustained-release formulations are driving the growth of the biologic excipients market globally.
