Abstracts

Biologic therapeutics drugs are genetically engineered proteins derived from human genetic material. They contain sugars, proteins, nucleic acids, or complex combinations of these substances, or may be living entities such as cells and tissues. In addition, biologics drugs are derived from natural sources such as animals, humans, and microorganisms that are further utilized to make therapeutic products such as vaccines, blood components, and recombinant therapeutic proteins.

Scope of the Report:

This report studies the Biologic Therapeutics market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Biologic Therapeutics market by product type and applications/end industries.

First and foremost, increasing reimbursement for biologics is predicted to positively influence the biologic therapeutics market in the upcoming years. Medical insurance companies and state-run insurance schemes are increasingly accepting claims against biologic therapeutics. Biologic therapeutics are gaining popularity due the efficacy of biologic therapeutic drugs and fewer side effects than chemical-based drugs. This is because biologic drugs are obtained from natural sources such as plants, or even living components such as cells and tissues of animals, microorganisms, or humans. These fragments are further treated to make therapeutic products such as blood components, vaccines, and recombinant therapeutic proteins.

Increasing prevalence of chronic diseases such as cancer, diabetes, and coronary artery diseases and a growing geriatric population are some other factors contributing to the biologic therapeutics market. In addition, mounting clinical trials and innovative

research and development practices to develop novel drugs is boosting the growth of biologic therapeutics market.

On the flip side, manufacturing difficulties due to complexities of drug molecules is challenging the growth of biologic therapeutics market. Nevertheless, increasing research and development in the pharmaceutical sector and rising applications of biologics is anticipated to provide new opportunities to this market.

The global Biologic Therapeutics market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
