According to our (Global Info Research) latest study, the global Biological Clean Room Secondary Assembly Project market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The secondary distribution project is a process in which after the primary project is completed, the user equipment arrives at the site, and the pipelines that have been introduced into the workshop are respectively connected to the user equipment, so that the equipment machine can be installed and operated smoothly according to the plan, and can be used normally. Including the installation and testing of pipelines, valves, instruments, etc. for power systems, PCW systems, exhaust systems, ROR systems, NG systems, and vacuum systems.

According to the clean room, it is divided into the secondary distribution project of the industrial clean room and the secondary distribution project of the biological clean room.
