Abstracts

The global Biological Control Services market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Biological control services refer to the use of biological natural enemies, biological pesticides and other means to prevent and control pests and diseases in agriculture, forestry and other fields, so as to protect the healthy growth of crops, trees and other plants. As people pay more attention to environmental protection and health, the development prospects of biological control services are very broad. As people's attention to concepts such as green, organic, and environmentally friendly continues to increase, the demand for biological control services will also continue to increase. As an environmentally friendly and safe prevention method, biological control can effectively reduce the use of chemical pesticides, reduce environmental pollution, and protect beneficial organisms and ecological balance. Therefore, more and more consumers will choose to use biological control services to ensure food safety and the ecological environment.
