Abstracts

According to our (Global Info Research) latest study, the global Biological Dura Patch market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The dura mater is a dense, leathery membrane that covers and protects the brain and spinal cord. A dural graft substitute is used when the opening in the dura is too large to be stitched together. Dural replacements are necessary to prevent CSF leakage and to allow the opening of the dura to heal after surgery. Dural substitutes can be biological, harvested from animal or human cadavers, or synthetic, and used as inlays or sutureable grafts. The main benefit of using a dura mater substitute is that it resembles the patient's dura mater and is able to absorb and integrate itself into the host tissue.
