## Abstracts

The global Biological Dura Patch market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The dura mater is a dense, leathery membrane that covers and protects the brain and spinal cord. A dural graft substitute is used when the opening in the dura is too large to be stitched together. Dural replacements are necessary to prevent CSF leakage and to allow the opening of the dura to heal after surgery. Dural substitutes can be biological, harvested from animal or human cadavers, or synthetic, and used as inlays or sutureable grafts. The main benefit of using a dura mater substitute is that it resembles the patient's dura mater and is able to absorb and integrate itself into the host tissue.

This report studies the global Biological Dura Patch production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Biological Dura Patch, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
