Abstracts

A biological implant is manufactured to replace a damaged or missing biological structure. Biological implants are man made devices and design to help the biological anatomy function.

Biological implants help replace or stabilize injured tissue and are used in non-union repair, fractures, lens prosthesis, total joint replacements.

According to our (Global Info Research) latest study, the global Biological Implants market size was valued at USD 5598 million in 2022 and is forecast to a readjusted size of USD 7428.3 million by 2029 with a CAGR of 4.1% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
